Note to teachers and students on the marking schemes for the deferred examinations

Marking schemes published by the State Examinations Commission are not intended to be standalone documents. They are an essential resource for examiners who receive training in the correct interpretation and application of the scheme. However, it should be noted that the marking schemes for the deferred examinations may not necessarily be as detailed as the corresponding marking schemes for the main sitting of an examination, which serve to ensure consistency across a large team of examiners.

Marking schemes are working documents. While a draft marking scheme is prepared in advance of the examination, the scheme is not finalised until examiners have applied it to candidates' work and the feedback from examiners has been collated and considered in light of the full range of responses of candidates, the overall level of difficulty of the examination, and the need to maintain consistency in standards between the main sitting and the deferred sitting and from year to year. In the case of the deferred examinations, this means that the level of detail may vary by question, as the marking scheme will only have been finalised for the questions attempted by the candidates who sat these examinations.

In the case of marking schemes that include model solutions or answers, it should be noted that these are not intended to be exhaustive. Variations and alternatives may also be acceptable. Examiners must consider all answers on their merits, and will have consulted with a senior examiner when in doubt.

Future Marking Schemes

Assumptions about future marking schemes on the basis of past schemes (whether for the main examinations or the deferred examinations) should be avoided. While the underlying assessment principles remain the same, the details of the marking of a particular type of question may change in the context of the contribution of that question to the overall examination concerned. Accordingly, aspects of the structure, detail and application of the marking scheme for a particular examination will not necessarily be the same for the deferred sitting as for the main sitting or from one year to the next.

Marking Scheme

Structure of the marking scheme

Candidate responses are marked according to different scales, depending on the types of response anticipated. Scales labelled A divide candidate responses into two categories (correct and incorrect). Scales labelled B divide responses into three categories (correct, partially correct, and incorrect), and so on. The scales and the marks that they generate are summarised in this table:

Scale label	B	C	D
No of categories	3	4	5
5-mark scale	0, 2, 5	0, 2, 3, 5	0, 2, 3, 4, 5
10-mark scale	0, 7, 10	0, 3, 7, 10	0, 4, 6, 8, 10
15-mark scale		0, 5, 10, 15	0, 4, 8, 12, 15
20-mark scale			

A general descriptor of each point on each scale is given below. More specific directions in relation to interpreting the scales in the context of each question are given in the scheme, where necessary.

Marking scales – level descriptors

B-scales (three categories)

- response of no substantial merit (no credit)
- partially correct response (partial credit)
- correct response (full credit)

C-scales (four categories)

- response of no substantial merit (no credit)
- response with some merit (low partial credit)
- almost correct response (high partial credit)
- correct response (full credit)

D-scales (five categories)

- response of no substantial merit (no credit)
- response with some merit (low partial credit)
- response about half-right (mid partial credit)
- almost correct response (high partial credit)
- correct response (full credit)

In certain cases, typically involving incorrect rounding, omission of units, a misreading that does not oversimplify the work, or an arithmetical error that does not oversimplify the work, a mark that is one mark below the full-credit mark may also be awarded. Such cases are denoted with a * and this level of credit is referred to as *Full Credit -1*. Thus, for example, in Scale 10C, *Full Credit -1* of 9 marks may be awarded.

The only marks that may be awarded for a question are those on the scale above, or *Full Credit -1*.

A rounding penalty is applied only once in each section (a), (b), (c) etc. A penalty for an omitted unit is applied only once in each section (a), (b), (c) etc. There is no penalty for omitted units if the question specifies the unit to be used in the answer, and there is generally no penalty for an omitted euro symbol in questions involving money.

In general, accept a candidate's work in one part of a question for use in subsequent parts of the question, unless this oversimplifies the work involved.

Unless otherwise specified, an answer without sufficient supporting work is generally awarded the lowest non-zero level of credit (typically *Partial Credit* or *Low Partial Credit*, as appropriate).

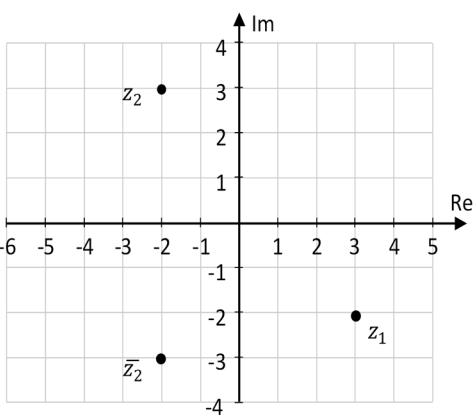

Summary of mark allocations and scales to be applied

Section A (150) Answer any five questions		Section B (150) Answer any three questions	
Question 1 (30)	Question 4 (30)	Question 7 (50)	Question 9 (50)
(a)(i) 15D	(a) 15C	(a) 15C	(a)(i) 5B
(a)(ii) 5C	(b) 5C	(b)(i) 10C	(a)(ii) 10C

Detailed marking notes

Model Solutions & Marking Notes

Note: The model solutions for each question are not intended to be exhaustive – there may be other correct solutions. Any Examiner unsure of the validity of the approach adopted by a particular candidate to a particular question should contact his / her Advising Examiner.

Q1	Model Solution – 30 Marks	Marking Notes
(a) (i)	$z_1 = 3 - 2i \quad \text{and} \quad z_2 = -2 + 3i$ $\bar{z}_2 = -2 - 3i$ 	Scale 15D (0, 4, 8, 12, 15) 4 parts in the solution \bar{z}_2 and 3 plots <i>Low Partial Credit</i> <ul style="list-style-type: none"> • Work of merit, for example, real or imaginary part of \bar{z}_2 correct, or real or imaginary part of z_1 or z_2 plotted correctly • 1 part correct <i>Mid Partial Credit</i> <ul style="list-style-type: none"> • 2 parts correct <i>High Partial Credit</i> <ul style="list-style-type: none"> • 3 parts correct NOTE: Apply F* if labels omitted
(ii)	$z_1 - z_2 = 3 - 2i - (-2 + 3i) = 5 - 5i$ $ 5 - 5i = \sqrt{25 + 25} = \sqrt{50}$ $= 5\sqrt{2}$	Scale 5C (0, 2, 3, 5) 2 parts in the solution <ol style="list-style-type: none"> 1. Find $z_1 - z_2$ = in form $a + bi$ 2. Find $z_1 - z_2$ <i>Low Partial Credit</i> <ul style="list-style-type: none"> • Work of merit in one part, for example, some correct work in substitution for $z_1 - z_2$, or formula for Modulus <i>High Partial Credit</i> <ul style="list-style-type: none"> • One part correct and work of merit in the other part

(b)	$ \begin{aligned} & 3(2 - i) + i(5 + 2i) \\ &= 6 - 3i + 5i + 2i^2 \\ &= 4 + 2i \end{aligned} $	<p>Scale 5C (0, 2, 3, 5)</p> <p><i>Low Partial Credit</i></p> <ul style="list-style-type: none"> • Work of merit, for example, any correct expansion of brackets <p><i>High Partial Credit</i></p> <ul style="list-style-type: none"> • Multiplication fully correct
(c)	$2 - 3pi - 9 - ki = 4k + 1 - i$ <p>Real: $2 - 9 = 4k + 1$ $-2 = k$</p> <p>Imaginary: $-3p - k = -1$ $-3p + 2 = -1$ $p = 1$</p>	<p>Scale 5C (0, 2, 3, 5)</p> <p><i>Low Partial Credit</i></p> <ul style="list-style-type: none"> • Work of merit, for example identifies reals or imaginaries <p><i>High Partial Credit</i></p> <ul style="list-style-type: none"> • Correctly finds k or p

Q2	Model Solution – 30 Marks	Marking Notes
(a)	$\frac{2x - 5}{3} \geq \frac{x - 4}{2}$ $4x - 10 \geq 3x - 12$ $x \geq -2$ 	Scale 10C (0, 3, 7, 10) <i>Low Partial Credit</i> <ul style="list-style-type: none"> Carries out some relevant correct operation <i>High Partial Credit</i> <ul style="list-style-type: none"> One error, for example error in transposing but finishes correctly

Marking Scheme

Structure of the marking scheme

Candidate responses are marked according to different scales, depending on the types of response anticipated. Scales labelled A divide candidate responses into two categories (correct and incorrect). Scales labelled B divide responses into three categories (correct, partially correct, and incorrect), and so on. The scales and the marks that they generate are summarised in this table:

Scale label	A	B	C	D
No of categories	2	3	4	5
5-mark scale	0, 5	0, 3, 5	0, 3, 4, 5	0, 2, 3, 4, 5
10-mark scale			0, 4, 6, 10	0, 4, 6, 8, 10
15-mark scale			0, 5, 10, 15	0, 4, 8, 12, 15
20-mark scale				

A general descriptor of each point on each scale is given below. More specific directions in relation to interpreting the scales in the context of each question are given in the scheme, where necessary.

Marking scales – level descriptors

A-Scale (two categories)

- response of no substantial merit (no credit)
- correct response (full credit)

B-scales (three categories)

- response of no substantial merit (no credit)
- partially correct response (partial credit)
- correct response (full credit)

C-scales (four categories)

- response of no substantial merit (no credit)
- response with some merit (low partial credit)
- almost correct response (high partial credit)
- correct response (full credit)

D-scales (five categories)

- response of no substantial merit (no credit)
- response with some merit (low partial credit)
- response about half-right (mid partial credit)
- almost correct response (high partial credit)
- correct response (full credit)

In certain cases, typically involving incorrect rounding, omission of units, a misreading that does not oversimplify the work, or an arithmetical error that does not oversimplify the work, a mark that is one mark below the full-credit mark may also be awarded. Such cases are denoted with a * and this level of credit is referred to as *Full Credit -1*. Thus, for example, in Scale 10C, *Full Credit -1* of 9 marks may be awarded.

The only marks that may be awarded for a question are those on the scale above, or *Full Credit -1*.

A rounding penalty is applied only once in each section (a), (b), (c) etc. A penalty for an omitted unit is applied only once in each section (a), (b), (c) etc. There is no penalty for omitted units if the question specifies the unit to be used in the answer, and there is generally no penalty for an omitted euro symbol in questions involving money.

Throughout the scheme a correct relevant formula written is regarded as Work of merit, award the lowest non-zero level of credit (typically *Partial Credit* or *Low Partial Credit*, as appropriate).

In general, accept a candidate's work in one part of a question for use in subsequent parts of the question, unless this oversimplifies the work involved.

Unless otherwise specified, an answer without sufficient supporting work is generally awarded the lowest non-zero level of credit (typically *Partial Credit* or *Low Partial Credit*, as appropriate).

Summary of mark allocations and scales to be applied

Section A (150)		Section B (150)	
Answer any five questions		Answer any three questions	
Question 1 (30)	Question 4 (30)	Question 7 (50)	Question 9 (50)

		Scale 10C (0, 4, 6, 10) Note: 7 correct plots required Note: Tolerance – within correct box <i>Low Partial Credit</i> <ul style="list-style-type: none"> • Any one plot correct <i>High Partial Credit</i> <ul style="list-style-type: none"> • Up to 6 correct plots
(b)	Name: Outlier Reason: Supply issue with shop or shop closed at midday.	Scale 5B (0, 3, 5) <i>Partial Credit</i> <ul style="list-style-type: none"> • Work of merit e.g. correct name but no reason given or vice versa

(c)	Work on graph	<p>Scale 5B (0, 3, 5)</p> <p><i>Partial Credit</i></p> <ul style="list-style-type: none"> • Work of merit e.g. Joins the data points
(d)	From the diagram, sales of 290 (or similar from candidates line)	<p>Scale 5B (0, 3, 5)</p> <p><i>Partial Credit</i></p> <ul style="list-style-type: none"> • Work of merit e.g. 18·5 highlighted on the diagram
(e)	<p>Answer: 0·95</p> <p>Reason: All data close to line of best fit and near perfect correlation of 1</p>	<p>Scale 5B (0, 3, 5)</p> <p><i>Partial Credit</i></p> <ul style="list-style-type: none"> • Work of merit e.g. correct answer but no reason given • Selects a positive value from the given list • Incorrect answer with a plausible reason e.g. 0·7 positive correlation

Q6	Model Solution – 30 Marks	Marking Notes
(a) (i)	$ \angle BOC = \frac{360}{4} = 90^\circ$	Scale 5B (0, 3, 5) <i>Partial Credit</i> <ul style="list-style-type: none"> • Work of merit e.g. writes 360° <i>Full Credit :</i> <ul style="list-style-type: none"> • Correct answer without supporting work
(a) (ii)	$FE^2 = 5^2 + 5^2$ $FE^2 = 25 + 25$ $FE^2 = 50$ $FE = \sqrt{50}$ <p>or</p> $FE = 5\sqrt{2}$	Scale 5C (0, 3, 4, 5) <i>Low Partial Credit</i> <ul style="list-style-type: none"> • Work of Merit e.g. writes 5^2 • Theorem of Pythagoras written <i>High Partial Credit</i> <ul style="list-style-type: none"> • Finds $FE^2 = 50$
(b)		Scale 15C (0, 5, 10, 15) <i>Low Partial Credit</i> <ul style="list-style-type: none"> • Any one line drawn correctly to scale • Draws a pilot diagram <i>High Partial Credit</i> <ul style="list-style-type: none"> • Two correct lengths drawn. • Construction correct without arcs (having checked length of sides). <p>Note: Tolerance of ± 0.25 cm</p>

(c)

$$\begin{aligned}(x + 1)^2 &= (x - 7)^2 + x^2 \\ x^2 + 2x + 1 &= x^2 - 14x + 49 + x^2 \\ x^2 - 16x + 48 &= 0 \\ (x - 12)(x - 4) &= 0 \\ x = 12 \text{ and } x &= 4,\end{aligned}$$

but can't be 4 as would give side of -3

Ans: $x = 12$

Scale 5D (0, 2, 3, 4, 5)

Low Partial Credit

- Work of Merit
e.g. writes $(x + 1)^2$
- Theorem of Pythagoras written
- Correct relevant formula

Mid Partial Credit

- Fully expands brackets correctly

High Partial Credit

- Factorises correctly or fully substitutes correctly into $-b$ formula

Full Credit (-1):

- Fails to eliminate 4 as a solution

Section B**Contexts and Applications****150 marks**

Q7	Model Solution – 50 Marks	Marking Notes
